

ICT Task (Secondary)

This task uses the Hugo Gryn, Denise Affonço and Mosaic of Victims case studies.

Remind the students that ICT works as a powerful tool for getting messages across to groups and individuals.

Challenge them to use their own ICT skills to join the HMD 2010 **Legacy of Hope**.

Share the story of Hugo Gryn and **explain** that he worked in the media, using film and radio to communicate his message.

Discuss how ICT is always developing and there are now quick and excellent ways to share information. **Ask** students to tell you which ICT tools work best for them.

Give the students a choice of tasks. They may work alone or in small groups. If they work in a group they must write a short report at the end of the task showing how they divided up the work e.g. who did the research, the art work, the text, the web design.

Using either the Hugo Gryn or Denise Affonço or the Mosaic of Victims case studies and the HMD 2010 theme paper students should design and build an interactive website page or pages that can be published on the school intranet. The page should tell the audience about the aims of Holocaust Memorial Day, present a miniature case study and where possible a hyperlink to the chosen case study on the main HMD website.

Students should demonstrate that they have considered a wide audience, and the page should be of interest to students, their parents, school governors and the local community.

Or

Using the same case studies, **create** a powerpoint which could be shown at a local youth group or in an assembly on Holocaust Memorial Day.

Then

Use the results of the tasks to tell the whole school/college community about **The Legacy of Hope**.
